

HEMEROLOGIUM,

OR, AN

EPHEMERIS

For the YEAR of

OUR LORD, 1739.

Being the Third after Bissextile, or Leap-Year.

Wherein is contained the Diurnal Motions, Geocentric Aspects, and other Phænomena of the Celestial Wanderers; the rising and setting of the Sun, and Moon; the Lunations and Appulses of the Moon to the Planets, and her Signs: The *English* and Foreign Accounts; Terms, and Returns; the Time of High-Water at *London-Bridge*, and most other Ports of Note in *England*: With many other Things profitable, pleasant, and necessary.

Calculated, and referred to the Meridian of the ancient City *Winchester*, whose Latitude is $51^{\circ}. 3'$. and whose Longitude from *London* is $358^{\circ}. 40'$.

*Invigilate viri, tacito nam tempora gressu
Diffugiunt, nulloque sono convertitur annus.*

JUVENAL.

By { THO. WHITE,
and
JOHN JAMES, } Students in the Mathematics.

Imprimatur E. B. June 14, 1738.

L O N D O N.

Printed by R. REILY, for the Company of
STATIONERS.

To the READER.

READER,

WE here put into thy Hands, what has been the Contemplations, and Diversions of some of our vacant Hours: if it should be so fortunate as to afford thee any Profit, Pleasure, or Delight, we obtain our End, and all we expect from it. 'Tis true, we have not the Confidence to recommend the ensuing Work to the Perusal of Men of refined Reason; of acute Wits; of profound Judgments; and comprehensive Capacities: such Masters of Learning, and Knowledge, we profess ourselves unable to entertain with any thing worthy their Observation; and therefore, give them warning not to expect any thing more than the Production of a common, and ordinary Capacity, adapted to Men of our own Understanding, to whom, perhaps, it may not be unacceptable: yet we hope that the more Judicious will pardon and forgive those Faults and Imperfections, which are often to be met with, considering that our Oversights, and Mistakes, conduce not a little to the Advancement of their Honour; as a fair and beautiful Face appeareth abundantly more so, when compared with the withered Picture of the aged; so the elaborate, correct, and beautiful Works of these great Men, will seem to shine more strong, and vigorous; when compared to the Blemishes and Imperfections of ours; which probably may occur more frequent than we imagine. As to the Calculations, we believe they will be found to agree with Observation as near as most others: we are conscious that no Tables (yet founded, tho' upon best Hypotheses, that the Sagacity of Astronomers have found out) will at all Times exactly give the Places of the Planets in the Heavens. As to the other Part of our Work, particularly the Poem (if it may be allowed the Honour of that Name) running thro' the Months of the Year; we shall say but little in it's Behalf; acknowledging ourselves

not

To the READER.

not only Strangers to the Muses, but also their least Admirers; and had it not been for the Entertainment of those who are delighted with the gingling of Rhimes, we had wholly omitted Verse.

The Poem is an Account of the Errand of *Peace* from Heaven, (about the latter end of the Spring) to visit this our earthly Globe; together with the persuasive Arguments she useth to her Sister *Lætitia*, in order to obtain her Company; also how *Lætitia* excuseth herself; yet after the departure of *Peace*, she followeth, and overtaketh her: Their Congratulations: The Description of their Journey thro' the Astral Regions: Of their Knowledge about the occult Causes of the heavenly *Phænomena*: The Description of the Grove, to which they, arriving, retired unto in the Evening: The Dream of *Peace* related to her Sister *Lætitia*: Their Observations of the mutual Aspects on the second Night, during their nocturnal Perambulations; and their Astrological Deductions compared with the Dream: Their meeting *Astrea* the following Morning; and the Occasion of their Re-ascension together unto the Regions of Bliss.

A TABLE of the Moon's Age every Day, for 1739.

A Table of TERMS and RETURNS.

Hilary-Term begins *January 23.* ends *February 12.*

Returns or Essoign-days.	Exc.	Ret.	Ap.	W.
In eight days of <i>St Hilary</i> , <i>Jan. 20</i>	22	23	23	Tues
From the day of <i>St Hilary</i> in 15 days, <i>27</i>	29	29	30	Tues
On the morrow of Purif. of the b. <i>Mary</i> , <i>Feb. 3</i>	5	5	6	Tues
In 8 days of the Purif. of the bleff. <i>Mary</i> , <i>9</i>	10	10	12	Mon

Easter-Term begins *May 9.* ends *June 4.*

From the day of Easter in 15 days, <i>May 6</i>	7	8	9	Wed
From the day of Easter in three weeks, <i>13</i>	14	15	16	Wed
From the day of Easter in one month, <i>20</i>	21	22	23	Wed
From the day of Easter in five weeks, <i>27</i>	28	29	30	Wed
On the morrow of the Ascension, <i>June 1</i>	2	2	4	Mon

Trinity-Term begins *June 22.* ends *July 11.*

On the morrow of the Holy Trinity, <i>June 18</i>	19	20	22	Frida
In eight days of the Holy Trinity, <i>24</i>	25	26	27	Wed
From the day of the H. Trin. in 15 days, <i>July 1</i>	2	3	4	Wed
From the day of the H. Trinity in 3 weeks, <i>8</i>	9	10	11	Wed

Michaelmas-Term begins *October 23.* ends *November 28.*

From the day of <i>St Michael</i> in 3 weeks, <i>Oct. 20</i>	22	22	23	Tues
From the day of <i>St Michael</i> in one month, <i>27</i>	29	29	30	Tues
On the morrow of All-Souls, <i>Nov. 3</i>	5	5	6	Tues
On the morrow of <i>St Martin</i> , <i>12</i>	13	14	15	Thur
In eight days of <i>St Martin</i> , <i>18</i>	19	20	21	Wed
From the day of <i>St Martin</i> in 15 days, <i>25</i>	26	27	28	Wed

N. B. No Sittings in *Westminster-Hall* on Ascension-day, Midsummer-day, the 1st and 2d of *November*, and the 2d of *February*.

The *Exchequer* opens eight Days before any Term except Trinity before which it opens but four Days.

Note, That the first and last Days of every Term are the first and last Days of Appearance.

The glittering Planet *Venus*, is our Morning Star from the 8th day of *January* until the 20th of *October*, and from that Time our Evening Star to the End of the Year.

February 1739.

White and James.

First Quarter the 4 day at 1 afternoon.

Full Moon the 12 day at 4 afternoon.

Last Quarter the 19 day at 10 night.

New Moon the 26 day at 5 evening.

E.V.	G.A.	Moon set.	Replies, dear <i>Sister</i> , guarded by the Care Of Heaven, beloved of all the Blest that's here :
1	12	10 23	Don't wish to leave these lambent Courts of
2	13	11 31	Light ;
3	14	12 36	Where flows pure Pleasure, and unmixt Delight :
4	D	oM 36	To view where gloomy Darknes shades the
5	16	1 43	Day ;
6	17	2 42	Where Sorrow, Grief, and woful Pain, bear
7	18	3 38	Sway ;
8	19	4 29	In those vast Deserts, where's the savage Boar ;
9	20	5 15	Where rav'nous Wolves, and Lions howl and
10	21	5 56	roar :
11	D	6 26	Curb this Desire, great <i>Goddeſs</i> , who art rul'd
12	23	D rise	By equal Paſſions, and a Temper cool'd.
13	24	6 A 15	The <i>Regent</i> fair of calmest Amity,
14	25	7 26	Hear's this Diſſuaſion with Reluctancy ;
15	26	8 40	This dang'rous Journey loath to wing alone ;
16	27	9 54	That her Compliance eaſier might be won,
17	28	11 10	Persuaſive <i>Rhetoric</i> ſmoothly ſlicks her
18	D	March	tongue ;
19	2	oM 28	Her Tongue Words dropping not unlike to theſe
20	3	1 41	Whoſe heav'nly Softneſs languish in our Verſe
21	4	2 54	Know thou, <i>Lætitia</i> , haſtily I'm ſent
22	5	3 56	By him who reigns, whoſe Pow'r's omnipotent :
23	6	4 48	I wiſh not (as thou thinks) to leave this Quire,
24	7	5 30	Warm'd with the ſaſhes of a vain Deſire :
25	D	6 1	What bids our <i>Soveraign</i> , we dare not gainſay
26	9	D ſets	All the Commands, Obſequious muſt obey.
27	10	6 A 48	Be not diſmay'd this Journey to refrain
28	11	8 1	By all the <i>Phantoms</i> , and <i>Chimera</i> 's vain,
			Pale <i>Lemurs</i> , with vaſt Deformities,
			Imagination in thy Brain can riſe.

Last Quarter the 21 day at 5 morning.
New Moon the 28 day at 6 morning.

M.	D.	A.	Moon sets.		
1	12	9	12	Say what's the Reason, why thou thus dost fear	
2	13	10	20	Dangers on Earth; as one that ne'er was there:	
3	14	11	29	What if they were so many, and so great,	
4	15	12	34	As thou imagin'st in Disguise, and Cheat:	
5	16	OM	34	Seeing thou hast in these fair Shrines of Bliss,	
6	17	1	31	Shar'd with me still immortal Happiness;	
7	18	2	27	Whenever call'd, advent'rous thou shouldst go,	
8	19	3	15	A mutual Partner in distress, and Wo.	
9	20	3	54	Where's that Affection which thou didst declare	
10	21	4	31	To be pathetic, Goddess like didst swear	
11	D	5	3	No Time, nor Distance, should abate its flame	
12	23	5	29	In torrid Zones, and frigid Climes the same?	
13	24	5	51	Now is the Time I shall unerring prove;	
14	25	D	rise.	How firm's the Basis of thy boasted Love.	
15	26	7A	49	Thus having said, she turns her self unto	
16	27	9	6	The heavenly Court, paying Obedience due:	
17	28	10	30	Now to our Solar System steers her Way,	
18	D	11	41	By the dim Radiance of terrestrial Day:	
19	30	12	50	On pliant Pinions, from the honour'd Choir,	
20	31	OM	50	She nimbly wings Celestial liquid Air.	
21	1	April			
22	2	2	52	Mean while <i>Letitia</i> robb'd of usual Ease;	
23	3	3	36	Toft on the Billows of <i>Aporian</i> Seas:	
24	4	4	13	Confusion finds, chill Horror seize her Heart,	
25	D	4	43	Runs thro'each Vein, rendering pale each part:	
26	6	5	7	Her self she feels (as <i>Peace</i> doth from her fly)	
27	7	D	sets	Drawn by the Bonds of tender Sympathy:	
28	8	7A	2	Her gone, ev'n Heaven affords but small De-	
29	9	8	9	light,	
30	10	9	18	Its Bliss seem pall'd, and Glories veil'd with	
31	11	10	26	Night.	Of

April 1739.

White and James.

First Quarter the 5 day at 5 in the morning.

Full Moon the 12 day at 6 in the afternoon.

Last Quarter the 19 day at 11 before noon.

New Moon the 26 day at 7 in the evening.

E.	G.	Moon	sets.	Of Stay impatient, from the <i>Ætherial</i> Sky :
1	D	11	25	She swiftly moves with such Velocity,
2	13	12	24	As can't by Numbers that have Names be
3	14	OM	24	shown,
4	15	1	16	Nor yet compar'd to Things by Mortals known;
5	16	1	59	And overtakes gladly the heav'nly Fair,
6	17	2	36	With bounding Pinions on refined Air :
7	18	3	8	While yet beneath their pendent Feet they sees
8	D	3	36	The fulgent <i>Bull's Eye</i> , and dim <i>Pleiades</i> ,
9	20	4	1	And glitt'ring <i>Orion</i> stormy Influence shed,
10	21	4	22	<i>Capella</i> , <i>Arctos</i> , and <i>Medusa's</i> Head,
11	22	4	44	And shining <i>Sirius</i> emulate the Day,
12	23	D	rife	And th' argent Lustre of the Milky Way.
13	24	8A	11	To the calm Ear of the celestial Maid ;
14	25	9	28	Uranic Air those gentle Sounds convey.
15	10	10	48	O, thou blest Offspring of a pow'rful Sire,
16	27	11	57	Whom Kings fatigu'd in Martial Toils desire :
17	28	12	55	Shall I abide, thou make thy Flight alone,
18	29	OM	55	To where rude Monsters sharp with Hunger
19	30	1	45	roam ; (sent
20	1	May		And now forsake thee, when from Blifs thou'rt
21	2	2	53	To meet bold Faction, and gruff Discontent :
22	D	3	20	No, surely no, sooner those Orbs of Light
23	4	3	42	Shall loose their Radiance, and be dark like
24	5	4	3	Night ;
25	6	4	25	Forget their Order, and harmonious Race,
26	7	D	sets	And roll confus'dly thro' th' Abyfs of Space.
27	8	8A	18	To whom, thus <i>Peace</i> , O great, O glorious Proof
28	9	9	17	Of thy Affection, and thy matchless Love; (sight
29	10	10	21	By which thou'rt drawn to leave the pleasing
30	11	11	18	Of heav'nly Mansions, and <i>Ætherial</i> Light ;
				Where's

E.A.	G.A.	Moon set.	
1	12	1	Where's <i>Homer</i> who in equal numbers sing,
2	13	0M	Not ruined <i>Ilion</i> , but a nobler Theme;
3	14	0	Eloquent <i>Nestor</i> , and <i>Ariston's</i> Son,
4	15	1	Wife <i>Socrates</i> , and learned <i>Xenophon</i> ,
5	16	1	<i>Tully</i> , and <i>Cato</i> , and the tuneful Strains
6	17	2	Of him who sung the <i>Aeneian</i> Toils and Pains,
7	18	2	And Myriads such as make the Choir above;
8	19	2	Whose Friendship, Interest, nor Mistake can
9	20	3	And follow me to that opacous Place, (move;
10	21	3	Where's none to meet you but adverse to these.
11	22	rise	Thus having said, in Swiftneſs they ſurpaſs
12	23	8A	The <i>Volant Orbs</i> , and nimble Moments pace.
13	24	9	Now at one View thoſe ſecret Cauſes ſee,
14	25	10	Which ſhunn'd the Sight of antient <i>Ptolemy</i> ;
15	26	11	And which appeared to <i>Tycho</i> , at the beſt
16	27	12	In Midnight Gloom at which he barely gueſs'd;
17	28	0M	Of which <i>Pythagoras</i> partly had a Sight,
18	29	0	Juſt at the Dawning of the Morning Light;
19	30	1	Which was from <i>Kepler</i> by thick Vapours veil'd;
20	31	1	Which our fam'd <i>Newton</i> thro' a Miſt beheld:
21	1	June	They ſee why ſome <i>Fixt Stars</i> ſhine bright, and
22	2	2	And then for Ages wholly diſappear; (clear,
23	3	2	And whether round <i>each</i> , as around our <i>Sun</i> ,
24	4	3	Revolving Worlds annual Circuits run;
25	5	3	If ſo, the Uſe for which they were deſign'd,
26	6	sets	And if they're peopled with ſome human Kind:
27	7	9A	Each latent Courſe which Doubtfulneſs affords,
28	8	9	And their true Diſtance from the ſolar <i>Orbs</i> :
29	9	10	Next ſees the <i>Apſis</i> of the unweildy <i>Maſs</i>
30	10	11	Of <i>Comets</i> , ſhining with a bearded Blaze,
31	11	11	B And

June 1739.

White and James.

First Quarter the 3 day at 1 in the afternoon.

Full Moon the 10 day at 9 in the morning.

Last Quarter the 17 day at 2 in the morning.

New Moon the 24th day at midnight.

E.A.	G.A.	Moon sets.		And measures true, their circumscribed Space ; Knows their Returns, and their parab'lic Race :
1	12	12	8	Now being come where <i>Saturn's</i> Orbit bend,
2	13	0	M 8	From thence to that of brighten'd <i>Jove</i> descend :
3	D	0	29	With ease inspect each <i>Motion's</i> secret Spring,
4	15	0	51	That of their <i>Guardians</i> , and the <i>Upper's</i> ring ;
5	16	1	13	Passing by <i>Mavors</i> , they arrive most soon
6	17	1	36	To the <i>Ellipsis</i> of our neigh'ring Moon.
7	18	2	0	
8	19	2	27	Now brings the circling Hour in its career,
9	20	3	2	The next glad Minute, and the <i>Blest</i> are here.
10	D	D	rise	
11	22	9	A 29	Be blithe ye Nymphs, be joyous youthful
12	23	10	17	<i>Svains</i> ,
13	24	10	56	Let your glad Accents eccho thro' the Plains ;
14	25	11	26	Cull fairest Flow'rs which the sweetned Field,
15	26	11	52	And verdant Meadows variegated yield,
16	27	12	13	And of them Wreaths, and Garlands make to
17	D	0	M 13	grace
18	29	0	34	<i>Latitia's</i> Temples, and the Brow of <i>Peace</i> :
19	30	0	56	See the glad <i>Earth</i> , to entertain the <i>Guest</i>
20	1	July		In fairest Blooms, and charms of Beauty drest,
21	2	1	44	To sweet the Air, profusely round <i>her</i> throws
22	3	2	11	The Queen of Flowers, the <i>Maiden</i> blushing rose :
23	4	2	46	The <i>tuneful</i> Choirs (Companions of the Spring)
24	D	D	sets	<i>She</i> bribes with Pleasure, and delight to sing.
25	6	8	A 33	Lo sable Vesper veils the dazzling Ray
26	7	9	10	Of Heav'ns <i>bright</i> Taper, and the Smiles of Day :
27	8	9	35	When first the <i>Goddeſs</i> , and her <i>Sister</i> land,
28	9	10	5	North of th' <i>Æquator</i> on a terrene Strand ;
29	10	10	29	And to the Covert of some Grove repair,
30	11	10	50	To shun th' Intemp'rance of nocturnal Air,

July hath XXXI Days.

White and James.

First Quarter the 2 day at midnight.

Full Moon the 9 day at 5 in the afternoon.

Last Quarter the 16 day at noon.

New Moon the 24 day at 4 in the afternoon.

E. A.	G. A.	Moon sets.	
1	D	11 11	And pass away in undisturb'd Recess, Night's heavy Hours, in soft Forgetfulness ;
2	13	11 32	There by a Brook, gladly reclines their Head Upon the Softness of a mossy Bed ;
3	14	11 54	And gentle <i>Slumber</i> answers to her Name, Call'd by still Murmurs of the purling Stream.
4	15	12 20	At length, appears <i>Aurora</i> gilded gay,
5	16	oM 20	And <i>Twilight</i> kindling to the Blaze of Day ;
6	17	o 51	Awakes <i>Lætitia</i> , sees the <i>matin Light</i> ,
7	18	1 35	And hies Sleep's Image after shades of Night ;
8	D	2 24	Turning unto yet slumb'ring <i>Peace</i> , espies
9	20	3 27	Unwonted Looks with Wonder, and Surprise,
10	21	D rise	Spread o'er her sadden'd Visage, and betray,
11	22	9A 18	How Thoughts most anxious in her Bosom lay :
12	23	9 47	While thus beheld <i>she wakes</i> as from a Trance,
13	24	10 11	With startled Eye, and fright'ned Countenance.
14	25	10 33	To whom, thus <i>she</i> blest Auth'ress of Relief,
15	D	10 54	In cutting Sorrows, and corroding Grief.
16	27	11 17	O <i>Sister</i> ; tell me what sad Thoughts are those
17	28	11 42	That cloud thy Brow, and ruffle thy Repose ;
18	29	12 9	But be refresh'd before the Air thou move
19	30	oM 9	(By Sounds I dread) with Pleasures of the
20	31	o 41	Grove.
21	1	August	
22	D	2 4	Behold the <i>Laurel</i> , and the <i>Myrtle</i> spread
23	3	2 56	Their boughy Verdure o'er our shaded Head ;
24	4	3 51	And flow'rs inwoven with each beauteous
25	5	D sets	Green,
26	6	8A 41	The bashful <i>Roses</i> , and pale <i>Jessamin</i> :
27	7	9 1	Beneath our Feet, the odorif'rous <i>Mint</i> ,
28	8	9 22	The yellow <i>Crocus</i> , azure <i>Hyacinth</i> ,
29	D	9 43	The silver <i>Primrose</i> , and the <i>Violet</i> blue,
30	10	10 4	At our Approach their faded Blooms renew :
31	11	10 31	B 3 Hear

August 1739.

White and James.

First Quarter the 1 day at 9 in the morning.

Full Moon the 7 day at midnight.

Last Quarter the 15 day at 2 in the morning.

New Moon the 23 day at 7 in the morning.

First Quarter the 30 day at 5 in the afternoon.

L.A.	G.A.	Moon		Hear round above us <i>Flocks</i> array'd with <i>Plumes</i> , Chant their glad <i>Sonnets</i> , and <i>symphonious Tunes</i> ;
		set.		
1	12	10	56	And gliding Streams beneath the shady Scene
2	13	11	28	Of whisp'ring <i>Oziers</i> softly murmuring :
3	14	12	17	These to assuage, and mitigate thy Wo,
4	15	OM	17	Appear invested with each Beauty, so
5	D	1	16	As to resemble those that do adorn
6	17	2	18	That glorious <i>Mansion</i> we left yester-Morn.
7	18	3	36	
8	19	D	rise	She scarce ended, but <i>Pacifera</i> breaks
9	20	8A	14	Her Silence, and in Accents sad thus speaks.
10	21	8	38	
11	22	9	3	Each <i>Leaf</i> and <i>Flower</i> display their Blooms
12	D	9	27	in vain,
13	24	9	52	To ease my Wo, alleviate my Pain :
14	25	10	15	In vain the <i>Lark</i> , and <i>Philomela</i> stretch
15	26	10	44	Their warbling Throats, in vain the tuneful
16	27	11	19	Thrush,
17	28	12	2	In vain the <i>Lymph</i> , as thro' those <i>Bow'rs</i> it runs
18	29	OM	2	Dance to soft Murmurs on the wearing Stones :
19	D	0	52	This Night I dreamt (yea more than dreamt) I
20	31	1	49	<i>Rebellion</i> , <i>Discord</i> , lead in Triumph <i>Law</i> (saw
21	Sept.			And <i>Right</i> , while Crowds of hideous Monsters
22	2	3	57	Their clam'rous <i>Io's</i> , and aloud <i>Huzzahs</i> : (raise
23	3	D	sets	Gazing, surpriz'd, methought I heard behind
24	4	7A	33	Most hateful Hissings of the Serpent's Kind :
25	5	7	54	I scarce had turn'd but <i>Malice</i> pale and wan,
26	D	8	14	And famish'd <i>Envy</i> , saw I, hast'ning on ;
27	7	8	36	At a small Distance, with some <i>Furies</i> more,
28	8	9	4	Who twining <i>Snakes</i> , and hissing <i>Adders</i> bore ;
29	9	9	35	No chearful Smile their meager Features grace,
30	10	10	16	But haggard Looks sat frowning on their Face ;
31	11	11	7	B 4 Where

September 1739.

White and James.

Full Moon the 6 day at 9 in the morning.

Last Quarter the 13 day at 7 in the evening.

New Moon the 21 day at 9 in the evening.

Last Quarter the 28 day at midnight.

E.A.	G.A.	Moon sets.	Where all the Signs and sad Effects appear
1	12	12 9	Of unsound Slumber, and invidious Care :
2	D	0 M 9	Thus looks the Visage of the Hell-born three
3	14	1 21	<i>Alecto, Megæra, and Tisiphone.</i> (spy,
4	15	2 42	As runs the <i>Sheep</i> when rav'ning <i>Wolves</i> they
5	16	4 4	As the chaste <i>Turtle</i> from the <i>Hawk</i> doth fly ;
6	17	D rise	So we from these devouring <i>Harpies</i> fled
7	18	7 A 11	With Trepidation ; an Escape scarce made.
8	19	7 34	Agast ; <i>Lætitia</i> hears the ill boading Dreams ;
9	D	7 58	In their <i>Meanders</i> stay, her sanguine Streams
10	21	8 24	Their Course, and curdle, and <i>she</i> pass away
11	22	8 55	With her in Sorrow the long ling'ring Day .
12	23	9 28	Now peaceful Night calmly returns again,
13	24	10 9	Stills the rough <i>Winds</i> , and smooths the ruff'd
14	25	10 57	Main :
15	26	11 51	While <i>Her</i> whose Title Chearfulness implies,
16	D	12 49	Sadden'd, in openest Prospect views the Skies,
17	28	0 M 49	Glitt'ring with <i>Stars</i> that round the Heavens
18	29	1 53	range,
19	30	3 1	To guide each Season, and <i>Terrestrial Change</i> .
20	1 Octob.		To <i>Peace</i> thus saith, lift up thine Eyes and see
21	2	D sets	The stellar Motions of yon <i>Canopy</i> ;
22	3	6 A 31	See that dim <i>Star</i> which rolls the outmost
23	D	6 55	Of <i>Sols</i> bright System, situated near (Sphere
24	5	7 20	To pale fac'd <i>Luna</i> , and a <i>Sextile Ray</i>
25	6	7 49	Dart to the <i>Herald</i> of approaching Day ;
26	7	8 26	While subtil <i>Hermes</i> in Conjunction is
27	8	9 11	With <i>Palilicium</i> , and the <i>Hyades</i> ,
28	9	10 9	<i>Mars</i> glance an Eye (mindful of <i>Vulcan's Wiles</i>)
29	10	11 16	On Love's fair Queen enamour'd with her
30	D	12 31	Smiles,

And

October 1739.

White and James.

Full Moon the 5 day at 8 in the evening.

Last Quarter the 13 day at 3 in the afternoon.

New Moon the 21 day at 10 in the morning.

First Quarter the 28 day at 6 in the morning.

E.A.	G.A.	Moon sets.	
1	12	0 M 31	And <i>she</i> , soon as few Days their Courses move,
2	13	1 51	Joins with the <i>Pleias</i> , and benignant <i>Jove</i> ;
3	14	3 10	And <i>sickly Cynthia</i> with her sharp'ned Horn
4	15	4 30	Pursue the Evening, as <i>she</i> flies the Morn,
5	16	D rise	And soon arrives unto the <i>Virgin Sign</i> ,
6	17	6 A 7	Where <i>him</i> who thunders thro' the Skies <i>she</i>
7	18	6 33	trine.
8	19	6 59	Configurations; which portend the same
9	20	7 31	Happless Events, as do thy ominous Dream.
10	21	8 10	To whom thus <i>Peace</i> , thy Observation's well;
11	22	8 57	Heav'n's spangled Face the like Events foretel
12	23	9 48	As do my Dream, and lo <i>inanimate</i>
13	24	10 44	<i>Things</i> seem <i>acquainted</i> with our rueful Fate;
14	25	11 45	And sympathize with us: See <i>Phæbe</i> wan,
15	26	12 51	And sad'ned Features, and pale Looks put on:
16	27	0 M 51	Black sable Vapours low'r on the Brow
17	28	1 59	Of Heav'n that was serene, and fair, but now
18	29	3 8	<i>She weeps</i> , and chrystal Tears glide down apace
19	30	4 19	From their moist Fountains, and bedew her
20	31	5 30	Face:
21	Nov.		Hear; <i>Zephyr's</i> penfive Sighings, which confess
22	2	D sets	Connatural Sorrows latent in his Breast:
23	3	6 32	The <i>Pine</i> , and <i>Fir</i> are weeping, and the <i>Trees</i> ,
24	4	7 13	To which was chang'd the sad <i>Heliades</i> .
25	5	8 8	O Heav'n: O <i>Phæbe</i> , <i>Zephyr</i> , and O <i>Pine</i> ,
26	6	9 10	O <i>Fir</i> , and <i>Poplar</i> ; changed strange is Time,
27	7	10 21	Since the bright Days when <i>Spring</i> serene and
28	8	11 42	fair,
29	9	12 58	Revolv'd its Circuit equal to the <i>Year</i> ;
30	10	0 M 58	When clam'rous <i>War</i> , nor <i>Faction</i> loud, nor fly
31	11	2 14	<i>Deceit</i> , nor Cheating, nor Hypocrisy,

Was

November 1739.

White and James.

Full Moon the 4 day at 10 before noon.

Last Quarter the 12 day at noon.

New Moon the 19 day at 2 in the morning.

First Quarter the 26 day at 3 in the afternoon.

E.A.	G.A.	Moon sets.	Was known to Mortals ; but they honour'd me, And <i>Sister Gladness</i> with Simplicity :
1	12	3 27	Then was no Sorrow to disturb our Rest ;
2	13	4 42	Eyes knew not weeping, nor a Sigh the Breast.
3	14	5 56	(Moon,
4	D	D rise	Night b'ing far spent, at last goes down the
5	16	5 A 27	Shades tenebrosious, and nocturnal Gloom,
6	17	6 1	Streight overspread th' expanded Hemisphere,
7	18	6 54	Blest with the Lustre of no twinkling Star.
8	19	7 29	While Heav'ns Vicegerents wander by themselves
9	20	8 27	O'er craggy Mountains, thro' impervious Vales :
10	21	9 29	Of Rest unmindful, and replete with Care,
11	D	10 34	Concern'd for Mortals, and their Safety fear.
12	23	11 38	But now <i>Aurora</i> , with a chearful Eye,
13	24	12 46	Peeps thro' the Windows of the Morning Sky ;
14	25	o M 46	From whose bright Presence dusky Shades of
15	26	1 54	Night
16	27	3 5	Fly swift away, and dreads to see the Sight.
17	28	4 18	The <i>Delegates</i> not far, dimly espies
18	D	5 34	Star pointed <i>Spires</i> , and lofty <i>Towers</i> rise
19	30	6 53	Their haughty Heads, endeavouring to shroud
20	1	Decem	Them with Earth's Vapours, an exhaled <i>Cloud</i> :
21	2	D sets	Beneath their Brows, a regal <i>City</i> stand
22	3	6 49	Stretcht o're the Surface of some Miles of Land ;
23	4	7 58	From whence they see one cloth'd in white array
24	5	9 17	Immaculate, affright'ned fly away ; (meet
25	D	10 36	Nearer approach'd, being known, they run to
26	7	11 54	<i>Her</i> with this kind Congratulation greet ;
27	8	1 M 9	Hail, dear <i>Astrea</i> , Mistress of yon <i>Shrine</i> ,
28	9	1 9	Honour'd by <i>Angels</i> , lov'd by <i>Pow'r divine</i> ;
29	10	2 22	Gladly we meet thee unexpected here ;
30	11	3 36	Auth'rix of Right, <i>Solamen</i> to our Care.

THE
SECOND PART
OF THE
HEMEROLOGIUM,
Or DIARY

For the YEAR of
Our LORD, 1739.

Being the Third after Bissextile, or Leap-Year.

Wherein is contained a Compendious Chronology of memorable Things, since the Creation, to this present Year; and the Calculations of the visible Eclipses, from good and approved Tables, founded upon the best Hypothesis yet known; and also the Times of the Sun's Ingress into the four Cardinal Signs, (*Aries, Cancer, Libra, and Capricorn*) with a Figure of the Heavens, at the Time of his Ingress into the Celestial Ram.

- - - - non ego paucis
*Offendor maculis, quas aut incuria fudit,
Aut humana parum cavit Natura* - - - - HORAT.
every Reader should say.

Of the Eclipses this Year 1739.

WITHIN the Perimeter of this Year, there will happen to be seen by the Inhabitants of this earthly Globe, five Eclipses of the two great Luminarian Lamps of Heaven; and three of them will be of the Sun, and two of the Moon; of which, two of the Sun, and, one of the Moon, will be visible in our *British* Hemisphere; the Calculations of the visible Eclipses, we shall here insert in order.

The first is an Eclipse of the lesser Luminary the Moon, on the 13th Day of *January*, a little before Midnight, according to the following Calculation.

	S	D	
	D	H	
The middle Time of the true 8 <i>Jan.</i>	13	11	16
The Sun's Place - - - - -	♊	4	37
The Moon's Place - - - - -	♋	4	37
The Nodes Place - - - - -	♋	12	39
The Latitude of the Moon South - - - - -			37
Reduction add - - - - -			1 49
Time of Reduction - - - - -			3 53
The true 8 respecting the Ecliptic <i>Jan.</i>	13	11	12
Equation of time <i>Subt.</i> - - - - -			13
The apparent Time of the 8 <i>January</i>	13	10	59
The apparent Time of greatest Obscuration	13	11	7
The Time of half Duration - - - - -		1	21
The apparent Beginning of the Eclipse	13	9	46
The end - - - - -	14	12	28
The Total Duration - - - - -		2	42
Digits eclipsed - - - - -		6	34

The

WHITE and JAMES. 1739.

The second, is an invisible Eclipse of the Sun, on the 28th Day of *January*, at four in the Morning, happening long before Sun rising, so that no more need be said of it.

The third, is of the Moon, on the 9th Day of *July* at four in the Afternoon; so consequently invisible to us, the Moon being far below the Horizon, but it will be conspicuous to our Antipodes.

The fourth, is a visible and partial Eclipse (or rather Occultation) of the Sun, on the 24th Day of *July*, in the Afternoon, as followeth:

	H
Beginning, <i>July</i> 24 - - -	3 26
Middle, or greatest Obscur. - - -	4 27
Visible Conjunction - - -	4 29
End - - - - -	5 35
The Total Duration - - -	2 9
The Digits eclipsed - - -	7 10

And the Times of the general Eclipse, happen thus.

The Eclipse begins at Sun rising, <i>July</i> 24 - - -	1 8
The Sun centrally eclipsed at his rising - - -	3 1
The Sun centrally eclipsed in the Meridian - - -	3 15
The Middle - - - - -	3 34
The Sun centrally eclipsed in the Nonages, <i>Deg.</i> - - -	3 46
The central Eclipse ends at Sun setting - - -	4 11
The Eclipse ends at Sun setting - - - - -	6 3
Total Duration - - - - -	4 55

The Sun riseth, when the Eclipse begins to the unknown Sea, that lyeth between *China* and *America*, in the Latitude of about 45 Degrees North, and Longitude 233 East: And the Sun riseth centrally eclipsed, North-West of *America*, in the Latitude of 70 North, and Longitude of

157 East: The Sun is centrically eclipsed in the Meridian, nearly under the northern Pole; the central Shade passing over the frozen Sea, North-East of *Great Tartary*: The Inhabitants of the eastern Parts of *Muscovy*, and the neighbouring Confines of *Tartary*, will see the Sun centrally eclipsed, just as he is leaving their Hemisphere; and he will set as the Eclipse ends in the Horizon of *Algiers*, a Kingdom of *Barbary*: And lastly, the Moon's lower Limb, will be observed to touch the Sun's upper in the Meridian, in the Country of *Persia*, not far from the *Caspian Sea*.

This Eclipse is no where at the Distance of our Earth total, but annular, the Moon being near her *Apogæon*, causeth her apparent Diameter to be less than the Sun's; therefore, at the Time of greatest Obscuration, where the central Shade falleth, an Observer will see the opacous Globe of the Moon swallowed up in the luminous Body of the Sun, and a bright Verge of Light all round the Lunar Circumference, a Phænomenon most delightful to behold.

The central Shade makes it's entrance on our Globe, in the unknown Ocean, North-West of *America*, and pursues it's Course Easterly, bending towards the South, passing over the frozen Sea, and North Parts of *America*; crossing the *Hyperborean Sea*, *Norway*, *Swedeland*, the *Baltic*, and the Gulph of *Finland*; and having arrived to the eastern Parts of *Muscovy*, takes it's leave of the Earth; and the Shadow passeth over the Surface of it, with the Velocity of almost 32 Miles in a Minute.

The fifth, and last, is of the Sun, and visible, on the 19th Day of *December*, at nine in the Morning. But this being a small Eclipse, not so much as two Digits of the Sun will be obscured. Wherefore we shall forbear to say any more about it.

*Twice Phebe hides in the cap'd Shade of Night,
And beam'd Apollo thrice abscond from Sight:
Behind a Vail, as if asham'd to see
Earth's senseless Follies and Stupidity.*

Of

Of the Four Quarterly Seasons.

WE esteem it proper in this Place, to acquaint our gentle Reader ; that *Astronomers* divide the Year into four Quarters, or Seasons, viz. *Spring*, *Summer*, *Autumn*, and *Winter* ; and that every one of those Seasons, commences at such times as the glorious *Lamp of Heaven* apparently makes his Entrance into the four *Cardinal Signs* : The Time of his Entrance into *Aries*, terminates the *Winter*, and begins the *Spring* ; then soon as he arriveth to *Cancer*, the flowry *Spring* gives way to sultry *Summer* ; which (as soon as bright *Sol* reacheth the *Ballance*, or *Libra*) gives place to declining *Autumn*, whose Dominion aged *Winter* doth usurp, at the Time of the Sun's Ingress into *Capricorn* : Thus we see how closely the Seasons follow each other ; that which is present, hastily pushed on by the succeeding ; as *Horace* elegantly hath it in these following Words,

Frigora mitescunt Zephyris : Ver proterit Æstas,
Interitura simul,
Pomifer Autumnus fruges effuderit : Et mox
Bruma recurret iners.

Translated by an Author thus :

*Soft Western-Winds, on Winter, Mildness bring,
Soon with' red Summer weareth out the Spring :
Then mellow Autumn pours his Fruits amain ;
And instantly dull Winter turns again.*

Of the Spring Quarter,

WHICH commences this Year *March* the 9th 13^h. 2'. P. M. at which Time the *Sun* (according to Appearance) enters the Celestial Sign *Aries*, or the *Earth Libra*, making equal Days and Nights all the World over, except under the Poles: This Quarter continueth, during the Earth's Motion through *Libra*, *Scorpio*, and *Sagittary*; and all the ensuing half Year, the Days are longer than the Nights. Now the *Birds* begin to warble forth their sweet Notes, as it were to welcome in the *Season*! Now the *Plants*, and *Flowers* begin to spring, adorning the Fields, perfuming the *Air* with their *Aromatic* Smells: Now the Heavens are serene and fair; and the *Rivers* glide gently down within their Banks; as *Horace* beautifully describeth it, in the twelfth Ode of his fourth Book.

Jam Veris comites quæ Mare temperant,
Impellunt Animæ lintea Thraciæ:
Jam nec prata rigent, nec fluvii strepunt
Hyberna nive turgidi.
Nidum ponit, *Ityn* flebiliter gemens,
Infelix avis, & *Cecropiæ* domus
Æternum opprobrium, quod male barbaras
Regum est ultra libidines.
Dicunt in tenere gramine pinguium
Custodes ovium carmina Fistula:
Delectantque Deum cui, pecus & nigri
Colles *Arcadiæ* placent.

Translated thus:

South Winds, the Spring attending still,
Now Seas be calm, and Sails do fill:
Now Frost make not the Meadows hoar,
Nor Winter Snow swollen Rivers roar;

WHITE and JAMES. 1739.

The Luckless Bird her Nest doth frame,
 Bewailing Itis, and the shame
 Of Cerops' house, and that so ill,
 On Kings rude Lust, she wrought her Will.
 The Shepherds of rich Flocks rehearse,
 And to their Pipes chant rural Verse:
 Seeking his Godhead to appease,
 Whose Flocks, and Hills Arcadian please.

The various Configurations and Aspects of the heavenly Bodies, are represented in the adjacent Scheme, as they will appear at the Time of the Sun's Entrance into the Æquinoctial Sign Aries this Year 1739.

Schema Cæli.

Astrological Observations.

The Face of the Heavens (as in the foregoing Figure, at the Time of the Sun's Ingress into the first Point of *Aries*) Astrologically viewed, doth portend a very sickly Spring, and gives us much cause to doubt the Wholesomeness of the Summer, and Autumn; and affords us much reason to fear, that an advantageous Peace, will, with much difficulty, be secured to some places in *Christendom*, without shedding of more human Blood: But we desire to be as brief as possible, and wish that Time, the Revealer of Secrets, may prove our Predictions false; in the mean while let every *English* Subject pray for the Common Wealth of *Great Britain*, and to be delivered from a Spirit of Ambition and Avarice; in its room to be possessed of a generous Soul, a benevolent Temper of Mind, that is desirous to maintain a well affected Disposition in his own Breast: So may we preserve Peace at Home; and, with one Accord, join to defend our Prince and selves from Injuries that may come from abroad.

The Diseases this Quarter, chiefly, are *Quinsys*, *Fluxes*, *Tertians*, *Synochas*, and *Fæbris putridæ*, &c.

Of the Summer Quarter,

WHICH continueth during the Sun's apparent Motion through *Cancer*, *Leo*, and *Virgo*: This Quarter begins, when the glorious Lamp of Heaven (the Sun) according to Appearance, enters the Tropical Sign *Cancer*, or, in reality, the Earth *Capricorn*) which happeneth this Year on the 10th day of *June*, 12^h. 18^h.

Post

Post Meridiem. *Sol* then is arrived to the *Vertex* of those who are in the Latitude $23^{\circ} . 29'$ North. In the Spring Quarter, on account of an equal *Temperature* of Air, the Juices of Trees and Plants were rarified, or thinned, to such a Degree, as to be fit to rise in their proper Tubes; also to move with a greater Velocity within the seminal Principles of their respective *Species*; nor then alone was the vegetable World influenced thereby; but also the *Animal* Fluids were made more fit for Circulation, tho' sometimes by too sudden a Rarification of the Blood in the Spring Season (the Orifices of the Excretory *Ducts* of the Skin not bearing Proportion thereto) Fevers of different Kinds are produced, especially in those Bodies that are of a *Sanguine* Constitution. Now in the Summer, the more warm Influence of the Sun tends to digest those Juices of Trees and Plants, and render their Growth more perfect. *Malignant*, and *Eruptive Fevers* may be expected in the latter Part of this Quarter.

OF A U T U M N.

THIS Quarter commenceth, when the *Sun*, by returning back from the Tropic of *Cancer*, apparently touching the Equinoctial Point of *Libra*, crossing the World's *Axis* at right Angles, and makes equal Day, and Night, to all those who live between the *Arctic*, and *Antarctic* Circles; which this Year, falleth on the 12th Day of September, 24' past 1 in the Afternoon; and continueth, during the Progress of the Earth, through *Aries*, *Taurus*, and *Gemini*, or the seeming one of the *Sun*, through *Libra*, *Scorpio*, and *Sagittary*. The *Distempers* that afflict in this Quarter, for the most Part continue long, and are difficultly cured; especially those that are caused by an *obstructed Perspiration*:

Perpiration: The Reasons that may be assigned are these; (*viz.*) in the *Spring*, our Blood becometh less dense, as the *Summer* draweth near; because of a greater Rarification of Air; and consequently, there is less pressure on the *Cuticular Scales* that cover our Bodies; therefore we perspire more, and so throw off the peccant Matter. The contrary is in *Autumn*; our Blood becometh less rare than before; as *Winter* approacheth, for the *Density* of the *Air* increaseth near the Surface of the Earth, obstructing *Perpiration* either by its weight on the *Cuticular Scales*, or stopping up (*with its constituent Parts*) the Orifices of the excretory *Ducts*, through which we daily ought to perspire.

Of the Winter Quarter.

THIS Quarter begins, when the *Sun* is seen (from the Earth) in the first Scruple of *Capricorn*; being arrived unto this *Tropical*, and *Solstitial* Point, which happeneth this Year, on the 11th Day of *December* 45' after 4 in the Morning; making the shortest Day, and longest Night in our Hemisphere: This Quarter continueth during the *Sun's* apparent Course through *Capricorn*, *Aquary*, and *Pisces*; and greatly afflicts aged People with languid Ills; while Youth, for the most Part, are healthy and vigorous.

Having just been treating of the *Sun's* Ingress into the four Cardinal Signs, *Aries*, *Cancer*, *Libra*, and *Capricorn*; or rather of the Earth's into the opposite ones, (*viz.*) *Libra*,
Capricorn,

Capricorn, Aries, and Cancer; and of the Vicissitude, and different Degrees of *Density*, that our *Air* in which we breathe is made subject to, by the more or less powerful Influence of the *Sun*; and also, how some Diseases owe their long continuance to a dense *Air*. In this Place, it may not be altogether unacceptable (so far as the Limits of our Paper will allow) to entertain our Readers with an account of some of the *Phænomena* caused by the real Motion of the *Earth*; in order to which be it first established as a Truth, that the common *Centre of Gravity*, (to all the Bodies belonging unto our System) is at, or near, the Centre of the *Sun's* Body, about which our *Earth*, and the rest of the planetary *Choir* do make their periodical Revolutions, (*viz.*) *Mercury*, the nearest Planet to the *Sun*, completeth his Revolution in about 3 Months; next to *Mercury*, *Venus* in about 8 Months: The *Earth* being next in order, doth revolve round the *Sun* in the Space of one Year: *Mars*, in about 2 Years: *Jupiter*, in 12 Years: *Saturn*, the outermost Planet, is near the Space of 30 Years, in finishing his Revolution round the *Sun*; and also all the *Comets* that yet have been observed, have been found to make their Returns after a certain Period of Time; particularly the two that appeared in the Reign of *King Charles II*; one of which was seen in the Year of our Lord 1661, whose Period is about 129 Years, and so will return in the Year of our Lord 1790: The other that appeared in the latter Part of the above Reign, *Anno Dom.* 1682, by being before observed, its Period is found to be about 75 Years; and doubtless will be seen in the Year 1758: If any one doubt the probability of this *Phænomena* in the Heavens, let him consult the *Tables* of the learned Dr *Halley*, and from thence, calculate the Places of those *Comets*.

But to return, the outermost primary Planet *Saturn*, hath five *Satellites*, or *Moons*, revolving round him: *Jupiter* hath four; and our *Earth* only one, the *Moon* her constant Attendant, in her annual Travels round the *Sun*.

Besides

Besides the *Annual Motion* of the *Earth*; she hath a diurnal Rotation (*viz*) turneth round on her *Axis*, from *West*, to *East*, once in 24 Hours; which causes the apparent Motion of the *Sun* from the *East*, unto the *West*, and the rising and setting of the *Moon*, and all the *Stars*, the alternate Returns of Day and Night: But because the *Axis* of the *Earth*'s diurnal Rotation (which is continued to some opposite fixt Points in the Heavens for Distinction called the *North*, and *South Poles*; the *North Pole* being always in our view, whose *Latitude* is North; but the *South Pole* deprest below our *Horizon*, and never visible to the Inhabitants of *England*) is not perpendicular to the Plane of that *Circle*, or *Ellipse*, in which the *Earth* doth annually revolve round the *Sun*; therefore the *Days*, and *Nights* are unequal, except at two times in the Year. To those People that live under the Equinoctial, the *Sun* continueth 12 Hours above their *Horizon*; and as many below throughout the whole Year; and in Proportion to the Distance of a Place from the *Equator*, or *Equinoctial*, the longest Day exceeds 12 Hours, and the Nights at the same Time are shorter than 12 Hours. Those who live under either of the Poles, enjoy the Light of the *Sun* full six Months; nor after that are they quite destitute of Light, for the *Crepusculum*, or *Twilight*, lasts near 2 Months; adding to this the Light of the *Moon*, which, when at the Full, is always in the Northern Signs, during the Continuance of the *Sun* in the Southern; so the Inhabitants of both Poles are never long in total Darkness.
